

**qube**™ The Art of Monitoring

**Introducing *qube***™ Inspired by simplicity and style, *qube* breaks with tradition to offer a fresh, new perspective in compact monitoring. Small and lightweight with a battery life that goes the distance, *qube* offers portability, accessibility and heightened connectivity—perfect for emergency-, general-, intensive- and post-anesthesia care units. Caregivers can access current, critical patient information—from bedside throughout transport—to provide the ultimate level of patient care.

### **Versatile**

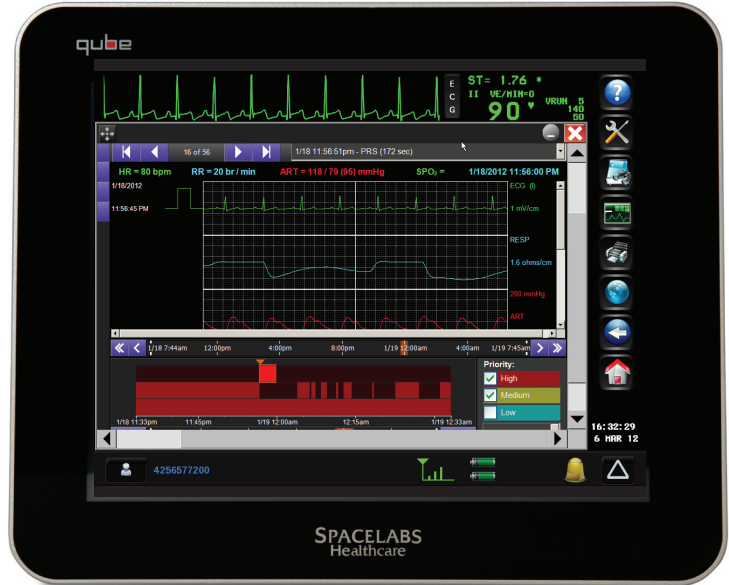

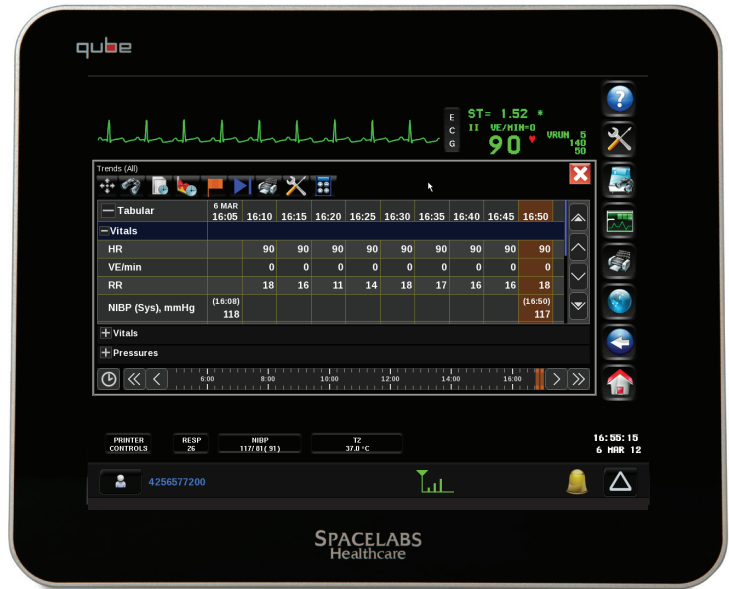

*qube* is mountable anywhere – wall, roll-stand, bed rail, anesthesia system – or can quickly be detached via a quick-release feature for immediate mobility. Long battery life and dual battery capability keep *qube* on the go everywhere your patient goes. Impact resistant, chemical resistant, and protected from liquid ingress, *qube* endures even with heavy use. Full functionality in a compact package.

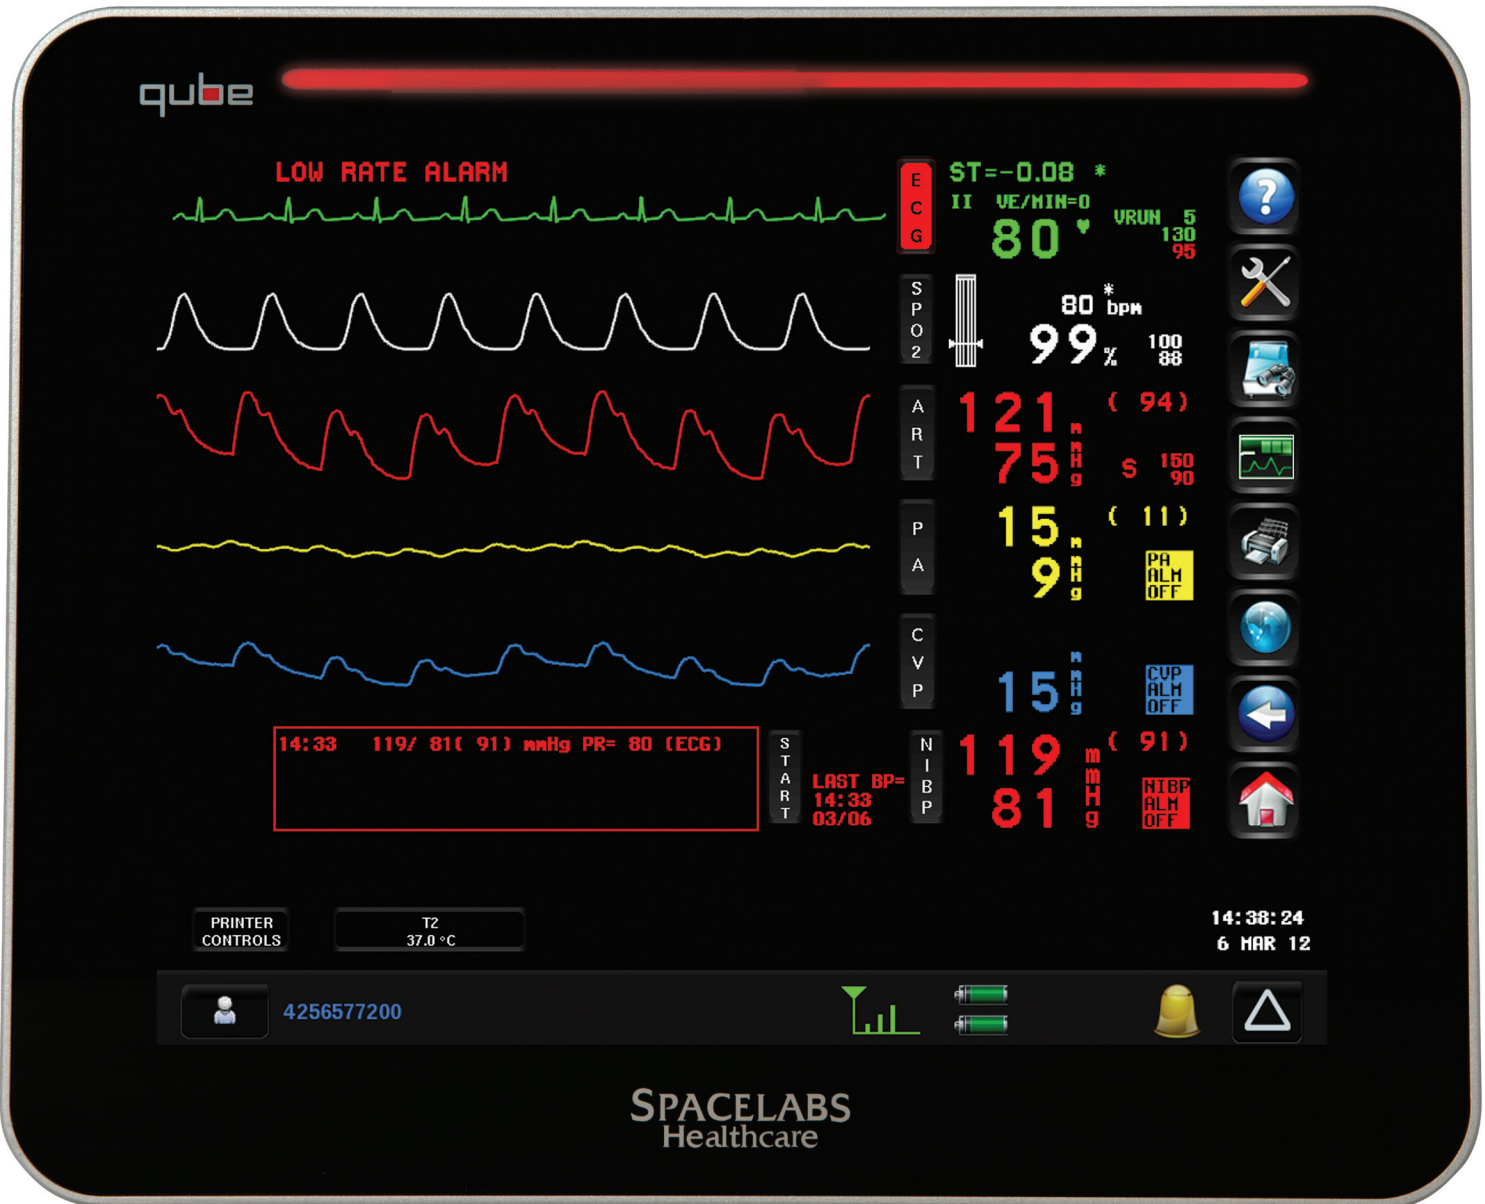

## Insightful

Data from a variety of sources informs and supports clinical determinations at the bedside or remotely. Graphical assessment tools and the ability to access up to 96 hours of physiologic data empower clinicians and help to facilitate decision making.

## Confident

Clinicians can customize the screen view to quickly access a multitude of graphical and tabular trend presentations based on individual patient needs and procedural guidelines. Interactive view, control, and recording for parameters, trends, and calculations can be engaged instantaneously, linking clinicians with a range of real-time patient physiologic data. *qube* enables point-of-care decisions that provide ongoing reassurance and confidence to patients and their loved ones.

**Enlightened**

qube facilitates at-a-glance monitoring with an ultra-bright display featuring large, numerics. Multicolor, severity-based lights

illuminate on both the front and back of the monitor for enhanced alarm surveillance.

### **Attractive**

The sleek, contemporary details of *qube*, including ergonomic user controls and a comfortable grip handle, create a positive impact for caregiver and patient. Art meets technology.

The small, compact form of the capnography pod makes it ideal for use with *qube*. Designed to attach seamlessly onto the rear of the monitor, it's ready in a snap.

**Connected**

With its modular architecture, *qube* easily connects to any Spacelabs physiologic module or Flexport for continuity and ease when networking across different platforms. *qube* also utilizes industry-standard communication protocols to allow

inter-monitor communication, enhanced alarm surveillance, and broader productivity through both wired and wireless channels. Clinicians can choose how they stay connected - single or multiparameter view - for any monitored patient on the network.
